– for professionals only –

## Lysin<sup>300</sup> minis

### In Short

- Lysin<sup>300</sup> minis are a Food for Special Medical Purposes (FSMP) for use in dietary management of rare metabolic disorders, e.g. Hyperornithinemia-Hyperammonemia-Homocitrullinuria syndrome (HHH) or Lysinuric Protein Intolerance (LPI), when supplementation with L-Lysine is indicated
- highly concentrated, pressed and coated L-Lysine – in tablet form
- easy to swallow – easy application
- neutral in smell and taste
- 300 mg (2,1 mmol) L-Leucine per tablet – 158 g tin at 250 tablets

### Product Profile

Lysin<sup>300</sup> minis are highly concentrated L-Lysine in tablet form – pressed and coated.

Lysin<sup>300</sup> minis allow a tasteless intake of this L-amino acid.

Due to their dosage form, they offer a convenient alternative, flexible and easy to take and simple to measure out.

Lysin<sup>300</sup> minis are not fortified with micronutrients.

### Administration

Lysin<sup>300</sup> minis should always be taken with a sufficient quantity of liquid. They should be taken along with other food and supplementary to the regular protein supplement – if applicable.

### Intake

The tablets should be swallowed unchewed as whole tablets. They should always be taken with a sufficient quantity of liquid. The tablets are not intended to be dissolved in water or other drinks prior to intake and they are not meant to dissolve in the mouth. We recommend to take the tablets in an upright position. The box must be closed tightly after use, also with the inner lid.

Note: The tablets are covered with a tasteless coating. This makes it easy to swallow them. However the layer is very thin. Thus, if the tablets were kept in the mouth for too long, this layer would dissolve and release the typical taste of an amino acid. This is why we recommend the administration above.

**Function** Lysin<sup>300</sup> minis are suitable for prevention or correction of disease related L-Lysine deficiencies.

**Indication** Lysin<sup>300</sup> minis can be used supplementary in the dietary management of Hyperornithinemia-Hyperammonemia-Homocitrullinuria syndrome (HHH) or Lysinuric Protein Intolerance (LPI).

**Dosage** The daily dosage depends on age, body weight and individual medical condition, and is, just as the right time for the daily intake, determined under medical supervision.

**Important Notice** Must only be used under medical supervision. Not for use as a sole source of nutrition. For enteral use only. Only for people with rare metabolic disorders, e.g. HHH or LPI. Lysin<sup>300</sup> minis are not suitable for infants in the first year of life.
