

## Glycin

### In Short

- Glycin is a Food for Special Medical Purposes (FSMP) for use in the dietary management of rare metabolic disorders, e.g. Isovaleric Acidemia (IVA), Serine Deficiency Disorders or Creatine Transporter Deficiency (CRTR-D), when supplementation with Glycine is indicated
- Glycine – in powder form
- suitable for tube feeding
- 200 g tin

### Product Profile

Glycin is highly concentrated Glycine in powder form.

Glycin is not fortified with micro-nutrients.

### Administration

Glycin should be taken along with other food and supplementary to the regular protein supplement – if applicable. Glycin is also suitable for tube feeding.

### Preparation

Glycin may be mixed with the protein supplement as needed and taken with it. Stirred into liquids, such as water, (diluted) juice or milk (substitute), it should be drunk quickly. Glycin may also be prepared with fruit puree and other foods permitted within the scope of the respective dietary management.

Always weigh the amount of Glycin needed. Always prepare freshly.

**Important Notice** Must only be used under medical supervision. Not for use as a sole source of nutrition. For enteral use only. Only for people with rare metabolic disorders, e.g. IVA, Serine Deficiency Disorders or CRTR-D. Glycin is not suitable for infants in the first year of life.

---

**Function** Glycin is suitable for prevention or correction of disease related Glycine deficiencies.

**Dosage** The daily dosage depends on age, body weight and individual medical condition, and is, just as the right time for the daily intake, determined under medical supervision.

Glycin can easily be combined with the products of the ZeroLeu-system.
